IBM WebSphere Cast Iron V7 Configuration

- IBM WebSphere Cast Iron Studio
- Demonstration: Studio tour
- Demonstration: Creating and validating a project
- Demonstration: Publishing a project
- Demonstration: Deploying a project
- Demonstration: Testing a project
- Demonstration: Good practices
- Web Management Console
- Demonstration: Common problem while publishing
- Variables and data transformation
- Demonstration: Viewing custom functions

- Demonstration: Creating variables
- Demonstration: Mapping outputs with a function
- Demonstration: Mapping inputs with a function
- Demonstration: Verifying mapping
- Testing project components
- Demonstration: Testing endpoint connectivity
- Demonstration: Testing mapping with generated data
- Demonstration: Testing mapping with sample data
- Demonstration: Verifying an orchestration in Studio
- Utility and logic activities
- Demonstration: Using the Create Job Keys activity
- Template integration projects
- Demonstration: Searching Template Integration Projects (TIPs)

Cast Iron V7.0 Database And Salesforce Applications

- Introduction to databases
- Demonstration: Creating a database endpoint
- Demonstration: Creating configuration properties
- Demonstration: Inserting database activity
- Demonstration: Querying the database
- Salesforce.com integration
- Demonstration: Creating a Salesforce endpoint
- Demonstration: Configuring a Salesforce query activity
- Demonstration: Mapping Salesforce account information into a database
- Demonstration: Verification
- More on databases

- Demonstration: Creating an email endpoint
- Demonstration: Creating an orchestration to detect insertions and send email
- Demonstration: Creating assets
- Demonstration: Verification
